WORK EXPERIENCE

Front-end Magento 2 developer
June 2018 - Current
Brandlive, Buenos Aires, Argentina
www.brandlivecommerce.com
I am the main developer of an e-commerce application based on Magento 2, a software that uses relational MySQL/MariaDB databases, PHP programming language and Zend Framework elements. My target is to make sure that all the elements in the store look visually correct, adjusting them if they don't match the design approved by the client.

Front-end Magento 1 developer
November 2017 - July 2018
EcloudSolutions, Rosario, Argentina
www.ecloudsolutions.com
I started here while I was studying, without any knowledge of Magento or frontend technologies. Day by day I was learning and gaining the trust of the team. Today I'm in charge of teaching magento to new developers who come to the company. Although today I develop code for Brandlive, I'm still part of the Ecloud Solutions team and helping with some difficult tasks.

More details about my work experience clicking here.
